Contribution to the knowledge of peat bog plant communities in the Orlické hory mountains

Emil Hadač & Josef Kučera

Abstract: We have studied the peat bog plant communities of the Jelení lázeň bog and of the bog near the Kunštátská kaple chapel in the Orlické hory Mts. The following plant communities were found: *Drepanoclado fluitantis*-*Caricetum limosae*, *Drepanoclado fluitantis* – *Vigneetum cinereae* ass.n., *Sphagno recurvi* – *Caricetum pauciflorae*, *Sphagno recurvi* – *Vaccinietum uliginosi* ass.n., *Eriophoro vaginati* – *Sphagnetum recurvi*, *Eriophorum angustifolium* – *Potentilla erecta* comm.

Keywords: peat bogs plant communities, Sudeten Mts., Orlické hory Mts.
